SUMMARY

Full-stack software developer who ships end-to-end: from architecture and data modeling through deployment and production support. Sole architect and operator of a production SaaS platform that automates referee assignment and scheduling for a regional basketball association, plus direct, customer-facing infrastructure work through an independent consulting practice. Comfortable across both modern (React/TypeScript, .NET/C#, PostgreSQL) and legacy enterprise stacks, with a focus on ownership, reliability, and sound engineering judgment.

EXPERIENCE

Jr. Software Developer

Mar 2026 – Present

PBS Systems

Calgary, AB

- Resolve bugs and implement features in a production dealership management system (VB.NET, CSLA .NET, WPF, Blazor) within a ticket-based agile workflow; optimized a form-reorder operation by replacing a per-item data-access loop with a batched command object to cut redundant round trips.

Full-Stack Developer

Apr 2025 – Mar 2026

Stream Data Systems

Calgary, AB

- Developed full-stack web applications with React/TypeScript frontends, .NET/C# and Node.js backends, and SQL Server databases, deployed to development, test, and production environments on IIS.
- Created RESTful APIs in .NET with JWT authentication, standardized error handling, and thorough endpoint testing; managed deployment pipelines using Azure DevOps, IIS configuration, and database migrations.
- Built and packaged a Prometheus/Grafana agent-based monitoring platform (CANsense), resold as a SaaS product with dashboards and alerting for client infrastructure.
- Integrated LLM-assisted features via the Claude API, including fallback handling and prompt-driven tooling used in day-to-day development and product work.
- Diagnosed and resolved production issues across the stack (data propagation, API routing, auth) and built the CANguard React Native mobile app with real-time features and API integration.

IT Consultant

Mar 2026 – Present

SyncedTech (independent practice)

Calgary, AB

- Deliver IT infrastructure and software consulting to small-business clients, owning projects end-to-end from scoping through deployment and support.
- Deployed Action1 RMM for endpoint management and patching, and configured resilient networking (LTE failover, dual-adapter setup) to maintain connectivity during outages.

PROJECTS

SyncedSport.com

2025 – Present

Next.js, TypeScript, Python, Drizzle, Clerk, Cerbos, PostgreSQL, Vitest/Playwright, MILP Optimization

- Built and operate a production league-management platform (referee assignment, scheduling, team/player management, real-time updates) as sole developer across 3,500+ commits with end-to-end test coverage (Vitest, Playwright); in production pilot with a regional basketball association, whose assignor called it a major improvement over their existing process.
- Designed a mixed-integer linear programming (MILP) optimizer in Python that generates conflict-free referee assignments under availability, eligibility, and travel constraints.
- Built a resilient data-import pipeline that ingests and normalizes messy third-party data, aligning frontend/backend contracts, resolving entities, and isolating each row in its own transaction for accurate partial-success reporting.
- Integrated third-party services (Stripe, Twilio, geocoding) with circuit breakers, timeouts, and exponential-backoff retries, plus inbound webhook signature verification.

CBOA Referee Portal

2025 – Present

React, Supabase (PostgreSQL), MS Graph API

- Built a production web application serving 200 active members of the Calgary Basketball Officials Association, with authentication, file storage, communications, and comprehensive logging.

EDUCATION

B.Sc. Computer Science (Chemistry Minor), University of Calgary

GPA 3.75 | 2019 – 2025

TECHNICAL SKILLS

Languages & Frameworks: C#/I.NET, TypeScript, Python, SQL; React, React Native, Next.js, Node.js, REST, JWT

Data & DevOps: PostgreSQL, SQL Server, Drizzle, Docker, Azure DevOps, CI/CD, Prometheus/Grafana, Claude API
